Writing task.

1 The purpose of the survey was to find out students' thoughts about use of artificial intelligence in education.

The results show that the majority of the students support the idea of AI in education. Possible reasons as to why that's the case are: possibility of automatization of many tasks, such as checking homework, making plans for future lessons, resulting in more of teacher's free time that could be used to ask help regarding difficult subjects. A quarter of the students are skeptical or concerned regarding the use of AI in education, possibly because of its imperfection, ~~possibly~~ resulting in mistakes in grading, or overcomplication of lessons with unnecessary information, or because of the ecological reasons, since AI ~~consumes~~ technology uses a lot of energy. Only 15% of people are unsure of their answers, or possibly not wanting to share their opinion.

My opinion on the subject are a lot closer to position I am not against the use of AI, however it should be used as a tool, assisting in some minor tasks, instead of completely replacing teachers' work. I ~~do~~ have some concerns regarding the energy consumption of this technology, but I hope it's going to be optimised in the future.

In conclusion, AI technologies are not unwelcome in education, as it's a really, really useful tool. Although it shouldn't be overused, and for now shouldn't replace teachers as a whole. As a suggestion, I would recommend testing it out in few classes before making it widespread, as well as optimising and hiring staff to manage it, to fix ~~any~~ issues that can and will occur, as they should be disposed of quickly.
